Introduction

This bulletin is designed primarily for a working hand-book. An attempt has been made to present all tables on a uniform basis and include information which from experience is most frequently used by research workers in the field or requested by outside agencies.

Because many of the more recent figures are subject to revision, they have been spaced to allow for changes. Provision has been made for the years up to 1961 so that additional figures may be added as they become available.

Most of the statistics are from published Dominion Bureau of Statistics sources, except some of the livestock and livestock product figures which are from publications of the Department of Agriculture. Many of the figures have been rounded.

Domestic disappearance of products other than grains does not include non-civilian consumption during the war years 1940 to 1945.

Since space is limited only one price series is shown for each commodity. As far as possible the price series relate to grades of the product on which initial payments and price support levels are based, i.e. Canadian Wheat Board initial payments and basic prices under the Agricultural Stabilization Act. In most cases price quotations are averages of actual market prices in representative markets.

Conventional Signs

Throughout the publication a blank space indicates that statistics are not available, a dash (-) indicates nil and (0) indicates that the figure was less than half the unit shown at the head of the column.
